

Perform the following operations using the cloud console, gcloud and gsutil. If an operation does not apply to a particular say so and explain why.

- Make a storage bucket
- Make a directory inside your bucket
- Copy a file into your directory
- Delete the directory (and the file inside it) in a single operation
- Make a VM
- Pause a VM
- Delete a VM
- Make a service account and give it permissions to access your storage bucket
- Delete the service account
- Delete the storage bucket

Turn in a pdf document with screenshots and/or command lines demonstrating your work.
